

1 Years | Aniket Vishwakarma| Node.js Developer

Professional Summary

Node.js Developer with 1+ year of experience building production-grade web applications for enterprise clients. Proficient in Node.js and React, with hands-on experience developing AI-integrated OCR systems, admin-controlled user management with CRUD operations, and AI-powered question generation using OpenRouter. Skilled in creating scalable, maintainable solutions and collaborating with cross-functional teams to deliver high-quality software.

Educational Qualification

B.A. in Political Science - Mahatma Gandhi Kashi Vidyapith (BHU) (2022-2025) | CGPA: 7.93

Technical Skills

Languages:	JavaScript, HTML, CSS, Python
Frameworks/Libraries	Node.js, Express.js
Databases:	MongoDB, MySQL, PostgreSQL
Tools/Software	Postman, VS Code, Chrome DevTools, Firebase, pgAdmin, MongoDB Compass, Docker
Operating Systems:	Windows
Version Control:	Git, Github
Domain Expertise:	REST API Development, Backend Development, Full Stack Web Development

Project Details

Project 1	AI-Powered OCR Construction Form Processor
Designation:	Backend Developer
Project Duration:	3 Months
Description:	An AI-based OCR system designed to digitize handwritten construction measurement forms and multi-page PDFs into structured digital data. The platform uses OCR and AI models to extract text and convert it into structured JSON format, enabling automated data processing and improved accuracy in construction documentation workflows.
Responsibilities:	- Designed and developed backend APIs using REST Framework for OCR-based data processing - Integrated Gemini AI to extract and structure handwritten text from multi-page PDFs into JSON format - Implemented authentication, input validation, and performance optimizations to support high-volume document processing

Project 2	Client InterviewPrep Portal – Interview Knowledge & Scheduling Platform
Designation:	Backend Developer
Project Duration:	02 Months
Description:	A web-based platform for managing interview knowledge resources and scheduling interviews with role-based access control and secure authentication.
Responsibilities:	• Implemented Users CRUD operations with RBAC, including admin capability to create and manage interview questions on behalf of users • Collaborated with team to integrate AI answer generation workflow into interview knowledge modules • Developed backend APIs for managing interview knowledge resources and user-specific data access

Project 3	Attendance Tracker: Enterprise Attendance & Leave Management System
Designation:	Backend Developer
Project Duration:	02 Months
Description:	Developed an attendance and leave management system using Node.js with Google OAuth and JWT-based authentication. Implemented rolebased access control, geo-fenced attendance tracking, and automated work-hour calculations. Designed leave workflows with approval hierarchy and dashboards for monitoring attendance and performance
Responsibilities:	• Designed and implemented RESTful APIs for attendance, leave, and user management modules • Developed validation logic for check-in/check-out and leave submission APIs • Built backend APIs for attendance tracking, leave workflows with approval hierarchy, and admin-level reporting dashboards

Project 4	Resume Processing Platform
Designation:	Backend Developer
Project Duration:	01 Month
Description:	Developed an AI-based resume processing platform using Node.js and React to extract structured candidate data from bulk PDF resumes. Implemented batch processing with queue-based handling, real-time progress tracking, and structured data extraction for recruitment fields. Designed a scalable system for efficient large-volume processing and reliable data output.
Responsibilities:	• Integrated AI-based resume parsing to extract structured recruitment fields from unstructured PDF documents • Implemented scalable backend architecture for handling concurrent resume processing requests • Designed data mapping and transformation logic to normalize extracted candidate information for consistent output
